Top Skills

Amazon Web Services (AWS)
Google Cloud Platform (GCP)
Linux

Certifications

Certified Kubernetes Administrator (CKA) with Practice Tests
Microsoft Active Directory Essentials on Windows Server 2019
GitLab Certified Associate
CompTIA Network+ (N10-007) Cert Prep: 1 Understanding Networks
NDG Linux Essentials English 1220

Mohamed M.Ahmed

System/Cloud Engineer | DevOps | Linux/Unix | Git | Jenkins | CICD | Docker | Kubernetes | Terraform |Ansible | VMware | Veeam
Abu Dhabi Emirate, United Arab Emirates

Summary

Highly motivated and detail-oriented DevOps Engineer with a passion for automation and improving system performance. Skilled in implementing CI/CD pipelines, automating system administration tasks, and collaborating with cross-functional teams to identify and resolve issues. improving system reliability, and increasing team productivity.

Experience

Shory
Senior System Engineer
October 2024 - Present (2 years 2 months)
Abu Dhabi

- Engineered and maintained multi-cloud environments, including AWS/GCP (EC2/VMs, S3/Buckets, Load Balancing, EKS, IAM, VPC) and Microsoft Azure, while also overseeing on-premises Data Centre Hardware (Servers, racks, UPS).
- Provided advanced Tier III support and administration for large-scale Windows and Linux Server environments.
- Managed the integration and maintenance of Active Directory (AD), ensuring optimal object performance, replication, and account lifecycle management (create, change, delete). Administered Office 365, Google Workspace, Google Apps, and Slack communication platforms.
- Developed and enforced a robust data protection strategy, including the 3-2-1 backup rule. Administered Veeam Backup & Replication systems , ensuring all jobs were effective and verifying Disaster Recovery (DR) solutions to meet defined RTO/RPO targets.
- Managed and implemented comprehensive security measures including planning all firmware and OS patching (Windows/Linux). Oversaw and managed Endpoint Protection (EPP/EDR), DLP, MFA, MDM, and data/HDD encryption systems.
- Conducted continuous system monitoring and performance tuning for critical production, Dev, UAT, and DR environments (cloud and on-prem). Performed

root cause analysis for incidents and implemented performance tuning, hardware upgrades, and resource optimization.
- Established and ensured compliance with Service Level Agreements (SLAs). Negotiated and managed vendor services, equipment, and suppliers , while actively working with teams to recommend innovative solutions.

Syber Group
3 years 10 months

System/DevOps Engineer
March 2021 - September 2024 (3 years 7 months)
Dubai, United Arab Emirates

- Create and maintain fully automated CI/CD pipelines for code deployment with Docker, Jenkins and Kubernetes
- Involved the process of standing up the infrastructure to migrate applications from legacy infrastructure to Kubernetes platform.
- Built and deployed Docker containers to break up monolithic app into microservices, improving developer workflow, increasing scalability, and optimizing speed.
- Create , insure backup using Veeam backup and Replication.
- Used GIT for source code version control and integrated with Jenkins for CI/CD pipeline, code quality tracking, build tools Maven .
- Write and maintain Helm charts to deploy applications into kubernetes clusters
- Installing, Integrating SonarQube with on-primse gitlab and Jenkins for code quality analysis
- Manage the daily Operations, Maintenance and Support of Deployed Applications, Services and Systems in alignment with Dev team for Syber Products (SyberPay - Syber Delivery - 3amir).
- Conduct periodic health checks and preventive maintenance
- Receive and attend incidents (fault analyses, determination of cause, and directing corrective action) .
- Support roll-out of new releases and systems in the Operations Environment; assist in Acceptance Testing by provisioning Resources in alignment with Development Team.
- Attend, review and sign-off Acceptance Tests (operational acceptance tests).
- Supervise infrastructure performance in operations, maintenance, administration and support
- Monitor and review abnormal condition reports and provide technical reports
- Ensure that Application and Services are able to deliver the best fit capacity and performance

- Work Collaboratively with Dev. Team across the Services/Apps lifecycle.

System Engineer
December 2020 - March 2021 (4 months)

ZainBlue Cloud:

Deploying, managing and performing cloud operation Task Related to:

- Vmware, (vCener, NSX, Esxi).
- Apply customers Firewall rules to NSX manager.
- Create New VPS according to customers specifications.
- Inspect and maintain customers VPS issues.

Sudanese Petroleum Pipelines Company (SPPC)
Information Technology Help Desk & System Engineer
August 2019 - August 2020 (1 year 1 month)
Khartoum, Khartoum State, Sudan

- Inspect and maintain hardware and software issues.
- Setting up hardware according to users specifications.
- Repairing and maintaining of Printers and linking all network printers to the network.
- Fixing network issues.
- MS windows server 2012 administration.
- Linux administration
- Implementing new systems to increase employees productivity.

Nile Petroleum Company (NPC)
Information Technology Help Desk
May 2019 - July 2019 (3 months)
Khartoum, Khartoum State, Sudan

- Computers Maintenance.
- Fixing network issues

Sudanese Petroleum Pipelines Company (SPPC)
Information Technology Help Desk & System Engineer
August 2017 - September 2017 (2 months)
Khartoum, Khartoum State, Sudan

- Computers Maintenance.
- MS windows server 2012 administration.
- Fixing network issues.

Education

Al-Neelain University

Bachelor's degree, Information Technology · (2013 - 2018)
